

Use of a Defibrillator/AED

1 Determine if an AED should be connected to the patient

- Unconscious but breathing normally? Put the patient in the recovery position.
- Unconscious but not breathing normally? Start immediately with CPR while others get the AED.

2 Get help!
Call 1-1-3

- Call 1-1-3
- Keep calm
- Who is calling?
- Where are you calling from?
- What has happened?

3 Turn the AED on and attach the electrode pads

- Get an assistant that can perform correct CPR
- While the assistant is doing CPR, connect the electrode pads to the bare and dry skin
- Attach one pad below the right collar bone, and the other approx 10 cm below the left armpit

4 Follow the instructions given by the AED

- Listen continuously to the AED's voice prompts
- Press the shock button if the AED recommends it
- Remember to avoid breaks from the CPR
- Look for signs of life
